FERNANDA FORTES CHAVES

Professional goal: Front-end, full-stack or software developer

Front-end programmer with almost 1 year of experience implementing E-commerce, institutional and B2B websites. I was responsible for implementing new websites for the company's Back-Office, creating JQuery functions, testing responsivity, providing training and customer service. I helped with work efficiency by providing the programming team with a list, on an editable platform for everyone, with the most used components on a website and their configurations, saving search time. Now I'm looking to combine what I learned at work with what I learned at college to create innovative projects to your customers.
